

Environmental policy

JSC "Chepetsky Mechanical Plant" is a producer of products from zirconium, calcium, superconducting materials, titanium and other metals for nuclear, chemical, metallurgical, aviation, medical and other industries.

CMP JSC realizes that technological processes ensuring manufacture of the products must not result in negative environmental changes and affect adversely personnel and population health.

The main strategic goals of CMP JSC in the field of ecology are ensuring environmental safety necessary for the sustainable development of CMP JSC and TVEL JSC, and mitigation of environmental impact of production and delivered products to minimum acceptable risk level.

The activities of CMP JSC in the field of ecology are based on the following principles:

- recognizing the potential environmental hazard of the planned and ongoing activity;
- ensuring the compliance of the activities of CMP JSC with the Russian environmental legislation, regulatory and other requirements adopted by CMP JSC, including as agreed with the Customers;
- application of technological processes, methods of control and monitoring of the state of the environment at existing and commissioned production facilities, ensuring the achievement and maintaining the level of environmental safety that meets up-to-date requirements;
- priority of actions aimed at preventing hazardous impact on humans and the environment;
- systematic and integrated approach based on modern concepts of environmental risk analysis and opportunities, to ensure the environmental safety of existing industries, to solve previously accumulated environmental problems, to assess the impact of the planned activity on the environment and human health when deciding on its implementation;
- constant readiness to prevent and eliminate the consequences of possible technogenic accidents;
- responsibility of management and personnel for damage to the environment and human health;
- openness and accessibility of environmental information, constructive interaction with stakeholders.

The main directions of the CMP JSC Policy in the field of ecology:

- ensuring the effective functioning and continuous improvement of the integrated management system for quality, ecology, health and safety and labour and energy resources with the participation of CMP JSC in accordance with requirements of ISO 9001, ISO 14001, ISO 45001, ISO 50001 and IAEA GS-G-3.1, and GSR Part 2;
- development and implementation of product design, technologies, equipment, the use of materials aimed at rational use of natural resources, reducing the negative impact on the environment, preserving the health of personnel and population;
- increasing the energy efficiency of production;
- development of information and analytical systems for environmental monitoring and environmental safety management;
- allocation of resources, including personnel, finance, technology, equipment and working hours, necessary to ensure environmental safety and environmental protection;
- ensuring continuous improvement of professional skills of the specialists of CMP JSC in the field of environmental safety and environmental protection;
- implementation of measures aimed at solving previously accumulated environmental problems;
- ensuring safe management of radioactive waste and production and consumption waste.

The managers, specialists and personnel of CMP JSC undertake the obligation to ensure the implementation of Environmental Policy.

Director General

S.V. Chineikin
